PROFESSIONAL SUMMARY

Computer Science engineering student (Integrated M.Tech, VIT-AP University) with hands-on Python experience building end-to-end ML and computer-vision pipelines — from data preprocessing and feature engineering through model training, evaluation, and deployment in Flask-based applications. Comfortable owning ambiguous problems independently, documenting systems thoroughly, and iterating fast. Actively deepening skills in agentic AI and GenAI tooling (Hugging Face Agents Course) to build systems that do, not just chat.

EDUCATION

Integrated M.Tech, Computer Science & Engineering — VIT-AP University
CGPA: 7.68 | Expected Graduation: June 2027

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, JavaScript

AI / ML: TensorFlow, OpenCV, MediaPipe, Scikit-learn, Pandas, NumPy, CNN, NLP, Feature Engineering, Model Evaluation

GenAI / Agentic AI (coursework): Hugging Face Agents Course, Google Gemini Academy, Microsoft Generative AI (LinkedIn Learning)

Backend & APIs: Flask, REST APIs, MySQL, Node.js

Tools: Git, GitHub, Docker, Linux, VS Code

PROJECTS

Email Bullying Detection System | Python, NLP, Scikit-learn

- Built an end-to-end text-classification pipeline — ingestion, tokenization, normalization, and feature engineering — to detect bullying/harassment content in email text.
- Iterated on feature selection and model parameters to reduce false positives, evaluating performance with standard classification metrics (precision, recall, F1).
- Documented methodology, results, and known limitations for reproducibility.

SkyWrite — AI Gesture-Controlled Virtual Whiteboard | Python, OpenCV, MediaPipe, TensorFlow, CNN

- Engineered a real-time computer-vision pipeline: hand-landmark extraction (MediaPipe, 21-point tracking) → gesture classification → CNN-based handwriting recognition (EMNIST-trained).
- Built modular, independently testable pipeline stages and resolved edge-case tracking failures through systematic debugging.
- Authored architecture and setup documentation to support long-term maintainability.

Fabric Marketplace with AI-Based Defect Detection | Flask, TensorFlow, OpenCV, MySQL, REST APIs

- Built a full-stack marketplace (Admin, Seller, Buyer roles) with a Flask backend, REST APIs, and a MySQL schema designed for authentication and product management.
- Integrated a CNN-based defect-detection model with an OpenCV preprocessing pipeline for automated quality checks.
- Implemented authentication and CRUD workflows end-to-end, independently, from design through deployment.

Personal Portfolio Website | HTML, CSS, JavaScript, GitHub, Vercel

- Designed and deployed a responsive site with live GitHub project integration and version history.

CERTIFICATIONS

Hugging Face Agents Course • Oracle Cloud Infrastructure 2025 AI Foundations Associate • Career Essentials in Generative AI (Microsoft & LinkedIn) • Google Gemini Academy 2025 • TCS iON Career Edge – Young Professional

CORE STRENGTHS

Independent Problem Ownership • Analytical Thinking • Technical Documentation • Testing & Debugging • Cross-functional Communication • Fast Learning
